Published: 11 October 2021

Since publication of the original article, the DOI to the dataset has changed. Here we provide updated data layers of human modification that include a revised human intrusion stressor calculated at 300 m, which result in higher human modification estimates for the change data layers. The updated datasets (v1.4) for change analyses are available in the update link “newer version” at <https://doi.org/10.5281/zenodo.3963012> (Theobald et al., 2021).
