

Supplement of

A long-term dataset of simulated epilimnion and hypolimnion temperatures in 401 French lakes (1959–2020)

Najwa Sharaf et al.

Correspondence to: Najwa Sharaf (najwa.sharaf@inrae.fr), Nathalie Reynaud (nathalie.reynaud@inrae.fr), Thierry Tormos (thierry.tormos@ofb.gouv.fr), and Rosalie Bruel (rosalie.brueel@ofb.gouv.fr)

Table S1: Initial filling years for reservoirs ($n = 302$), gravel pits ($n = 7$) and other artificial lakes ($n = 38$) of the LakeTSim dataset. The natural lakes from the dataset ($n = 54$) are also listed with NA in the other fields. “lake_type” includes the identification code of each lake as referred to in the PLAN_DEAU database (Pôle R&D ECLA, Aix-en-Provence). “type” includes the type of the lake (Reservoir, Gravel pit, Artificial or Natural). “year_source_cfbr” is the year of initial filling as listed in <https://www.barrages-cfbr.eu>. “year_PLAN_DEAU” is the year of initial filling as listed in the PLAN_DEAU database (heterogeneity in sources). “year_final” is the year used in this paper, by default “year_source_cfbr”. When “year_source_cfbr” was not available, “year_PLAN_DEAU” was used. NA indicates that no information was available and/or not relevant (in the case of natural lakes). “year_final” is the year used in this paper. For the “year_final”, a value of <1900 is considered when terms of specific periods or centuries are referenced. The column “stakeholders” gives, when relevant, the manager of the dam or lake.
