This document includes Figures S1-S7 and Table S1-S4 providing the supplementary information that supports description of data presented in the main article.

Figure S1: Maps of the dataset with color code for year. Localization of water column sampling

Figure S2: Results of 1156 CRM measurements in 2005-2023

Figure S3: Example of quality control (flags for cruises MOOSE-GE)

Figure S4: Comparison of  $f\text{CO}_2$  measured and calculated at site BOUSSOLE/DYFAMED in the Ligurian Sea

Figure S5: Comparison of  $f\text{CO}_2$  measured and calculated along SURATLANT tracks in the North Atlantic

Figure S6: Comparison of pH measured and calculated at the site ECOSCOPA in the Bay of Brest

Figure S7:  $A_T/\text{SSS}$  relationships observed in the Tropical Atlantic near the Congo and Amazon Rivers regions based on different cruises.

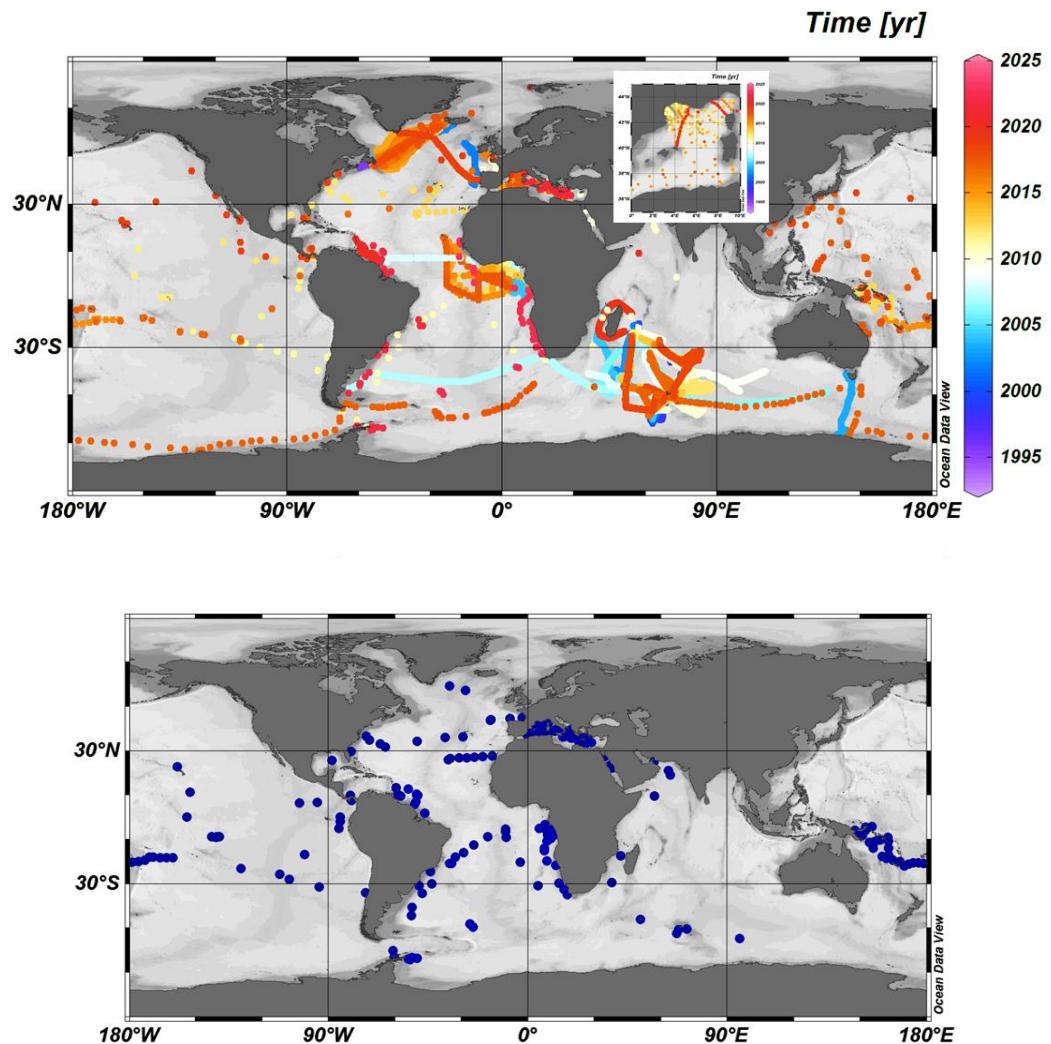

Table S1: List of cruises in the SNAPO-CO2-V1 dataset

Table S2: List of cruises with CRM Batch numbers

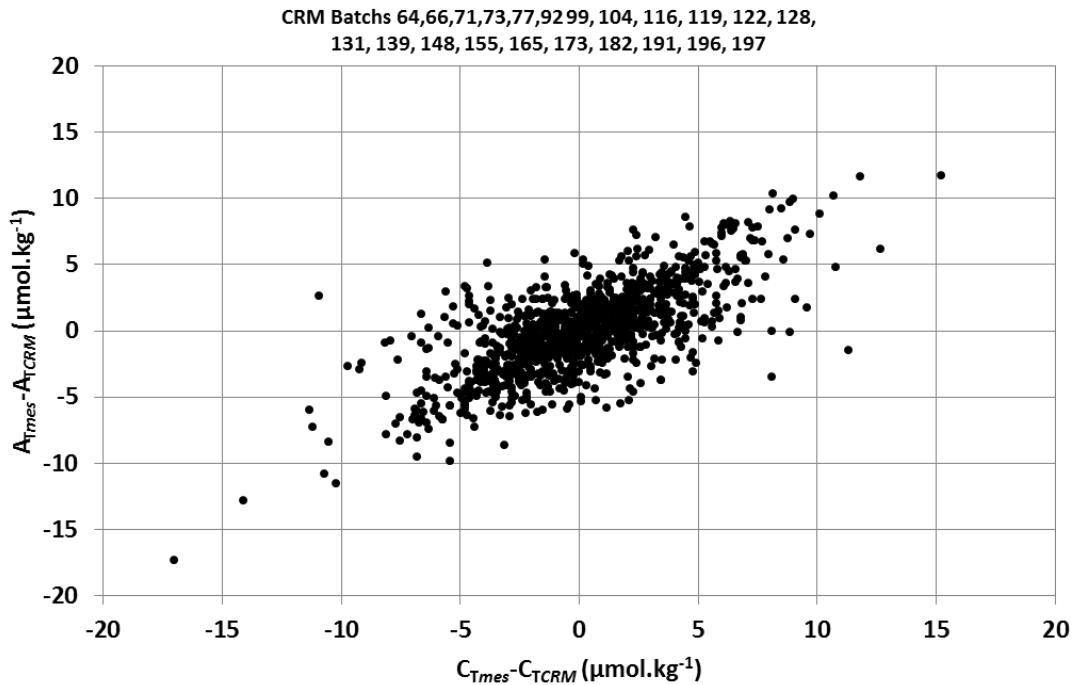

Table S3: List of cruises with references

Table S4: List of cruises with DOI

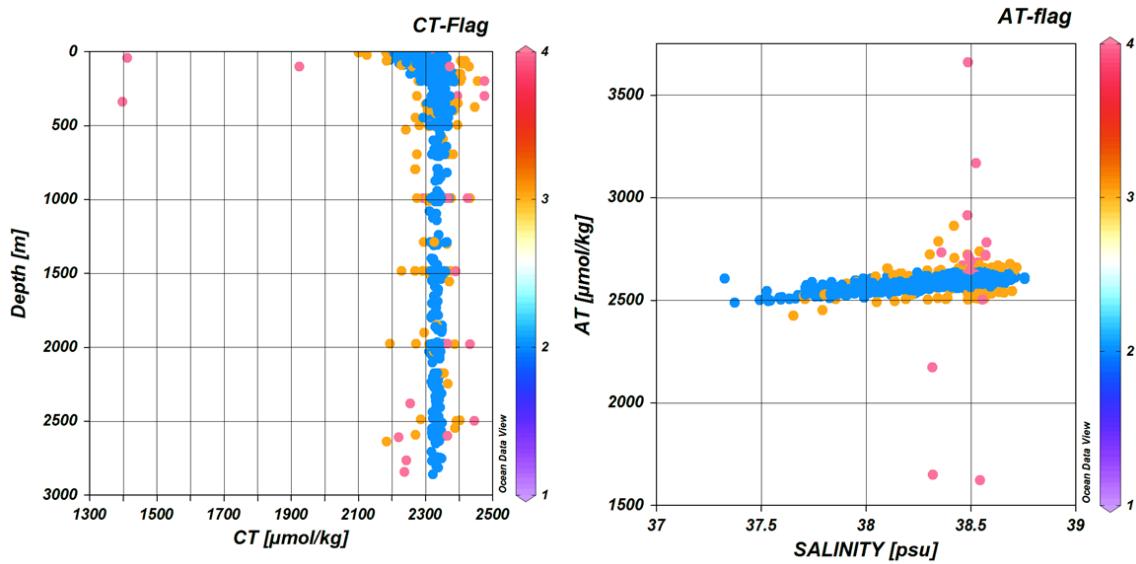

**Figure S1:** Top: Same as Figure 1 with Color code for Year. Locations of  $A_T$ - $C_T$  data (1993-2022) in the Global Ocean and the Western Mediterranean Sea (insert). Color code is for Year. Bottom: Locations of data with water column samples. Figures produced with ODV (Schlitzer, 2018).

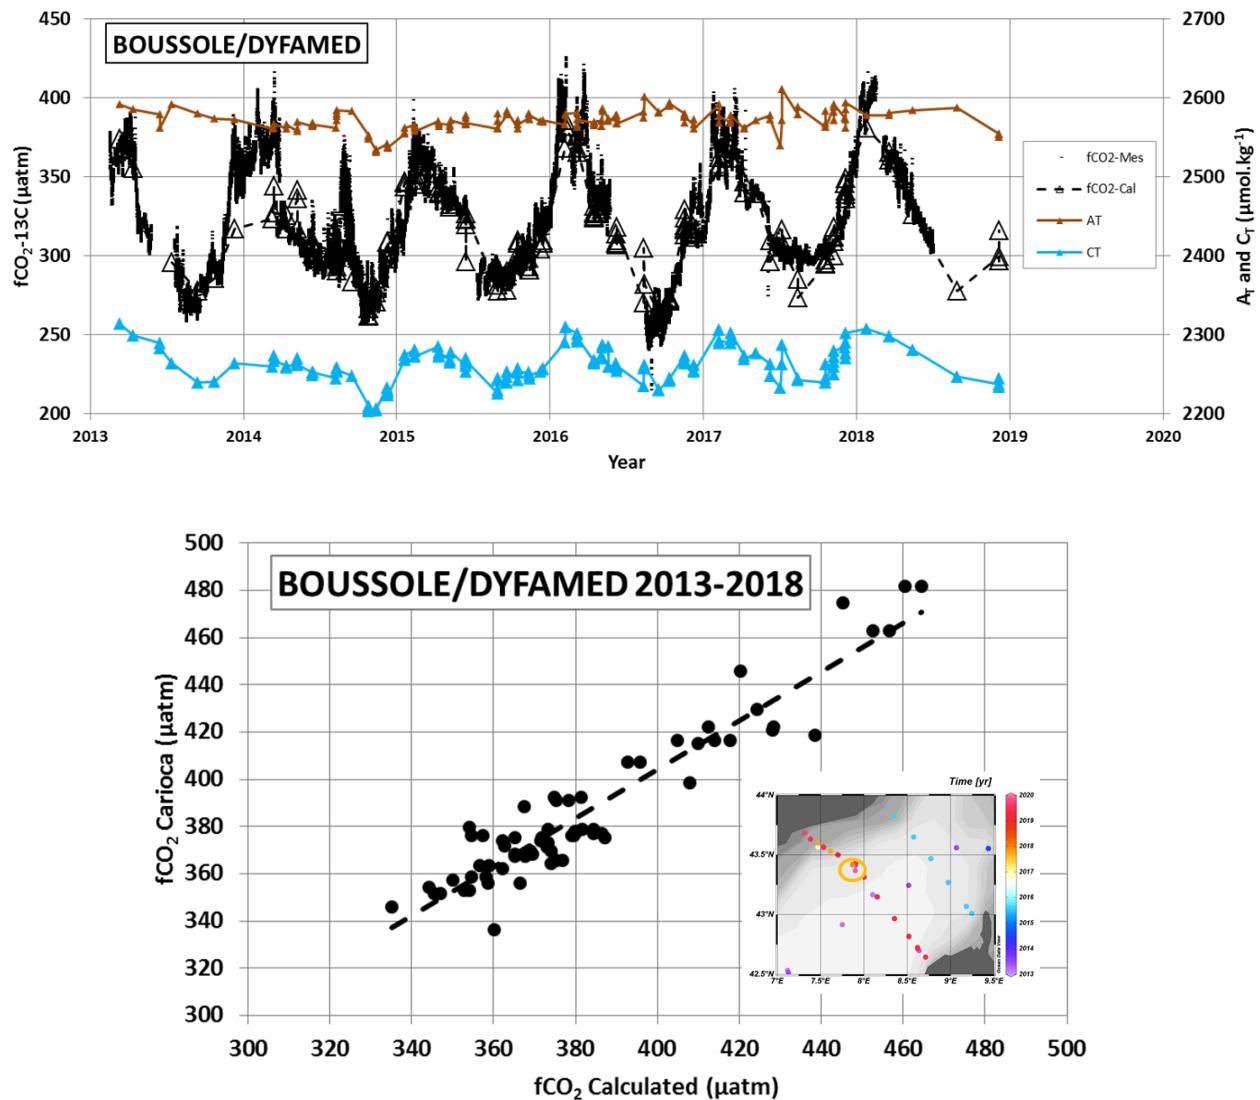

**Figure S2:** Results of CRM measurements in 2005-2023. The plot shows the differences of  $A_T$  versus  $C_T$  (Measured minus CRM reference) for 1156 CRM bottles and different CRM Batches analyzed in 2005-2023. For all 1156 analysis standard-deviations of the differences were  $\pm 3.21 \mu\text{mol}.\text{kg}^{-1}$  for  $A_T$  and  $\pm 3.48 \mu\text{mol}.\text{kg}^{-1}$  for  $C_T$  (or  $\pm 2.71 \mu\text{mol}.\text{kg}^{-1}$  and  $\pm 2.86 \mu\text{mol}.\text{kg}^{-1}$  for 1090 analysis when excluding few outliers). Differences higher than  $\pm 5 \mu\text{mol}.\text{kg}^{-1}$  were excluded for processing sample analyses but kept in this plot.

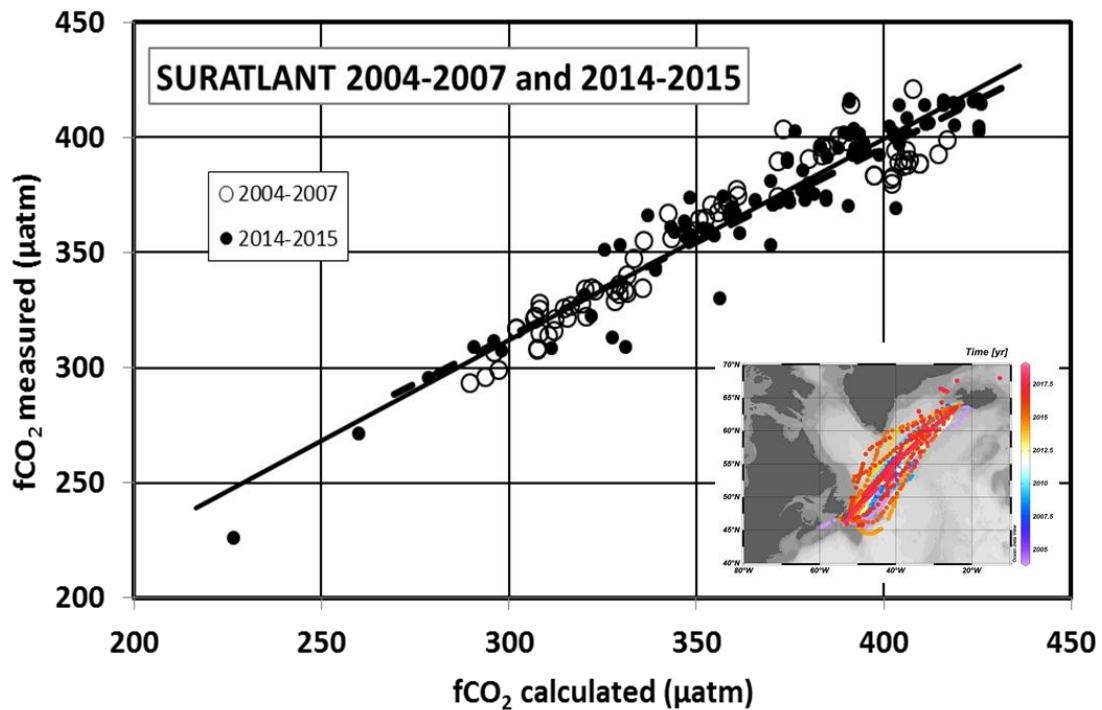

**Figure S3:** Example of Quality control (to assign secondary flags). Left: Depth profiles of  $C_T$ . Right:  $A_T$  versus salinity from the MOOSE-GE cruises in the Mediterranean Sea (2010-2019). All data are shown including Flag 2 (Good, blue), Flag 3 (Questionable, orange) and Flag 4 (Bad, red). Figures produced with ODV (Schlitzer, 2018).

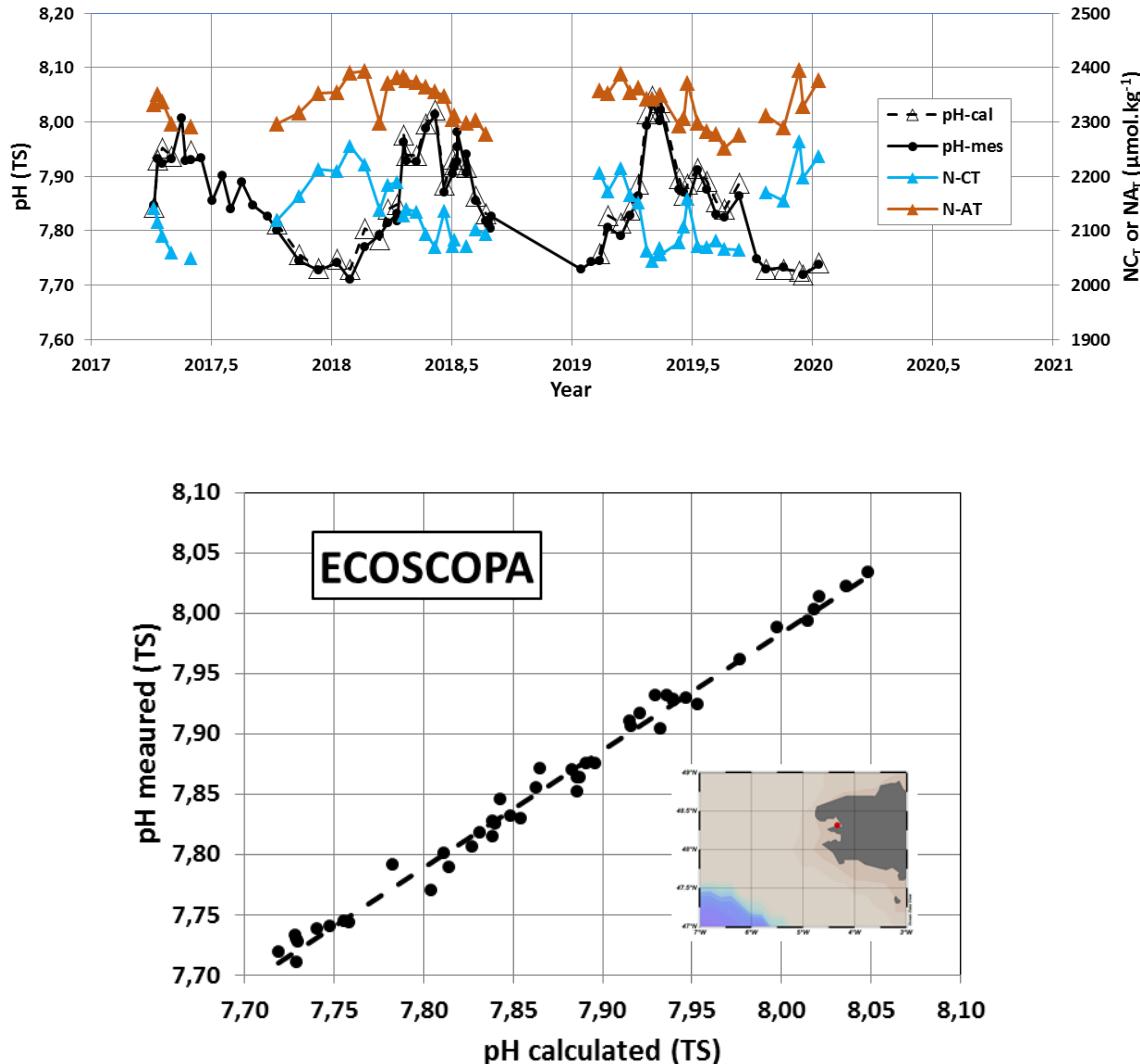

**Figure S4:** Top: Time-series for the period 2013-2018 of  $A_T$  (brown triangles, right Y-axis),  $C_T$  (blue triangles, right Y-axis),  $fCO_2$  calculated (open triangles, left Y-axis) and high-frequency  $fCO_2$  measured from CARIOCA (back dotted at 3 and 10m) at the station BOUSSOLE near DYFAMED in the Ligurian Sea (Merlivat et al, 2018; Golbol et al, 2020). For  $A_T$  and  $C_T$  data are selected in the top layer (0-20m) from BOUSSOLE, DYFAMED and MOOSE-GE samples at the same location. Here  $fCO_2$  is normalized at a temperature 13°C for which the seasonality is mainly driven by  $C_T$  (Merlivat et al., 2018; Coppola et al., 2020). Bottom: Measured  $fCO_2$  versus calculated  $fCO_2$  for co-located samples (Dashed line:  $fCO_2\text{-Carioca} = 1.0341*fCO_2\text{-Cal} - 9.321$ ,  $R^2 = 0.8976$ ). The mean difference ( $fCO_2\text{cal}-fCO_2\text{mes}$ ) for 67 co-located samples is  $-3.7 \mu\text{atm} (\pm 10.8) \mu\text{atm}$ . Localization of the samples is shown in the inserted map (orange circle).

**Figure S5:** Measured  $f\text{CO}_2$  versus calculated  $f\text{CO}_2$  for co-located samples on several SURATLANT transects in the North Atlantic (map inserted). The mean difference ( $f\text{CO}_{2\text{cal}} - f\text{CO}_{2\text{mes}}$ ) for 74 samples in 2004-2007 is  $-4.3 \mu\text{atm} (\pm 12.9) \mu\text{atm}$  (open circles) and for 98 samples in 2014-2015 is  $-3.0 (\pm 12.1) \mu\text{atm}$  (filled circles). Data from Reverdin et al., (2018).

**Figure S6:** Top: Time-series of salinity normalized  $A_T$ ,  $N-A_T$  (brown triangles, right Y-axis), salinity normalized  $C_T$ ,  $N-C_T$  (blue triangles, right Y-axis), pH calculated (open triangles, left Y-axis) and pH measured (filled circles) in the Bay of Brest (Rade de Brest, Brittany) in 2017-2019 (project ECOSCOPA, Petton et al., 2023). pH is here at 25°C (TS Total Scale).  $A_T$  and  $C_T$  are normalized at salinity 35. Bottom: Measured pH versus calculated pH for the same samples. The mean difference ( $pH_{cal}-pH_{mes}$ ) for 46 samples is 0.013 ( $\pm 0.010$ ). Localization of the station is shown in the inserted map (red dot).

**Figure S7:**  $A_T$ /salinity relationships observed in the western and eastern tropical Atlantic near the Amazon and Congo Rivers regions. Data are from different cruises, season and years. In the Amazon sector data are from PLUMAND, EUREC4-OA and TARA-MICROBIOME cruises (triangles); in the Congo sector data are from EGEE, PIRATA-FR and TARA- MICROBIOME cruises (circles). For the Amazon sector (grey dashed line) the relationship is  $A_T = 60.016 \text{ SSS} + 197.83$  ( $R^2 = 0.9805$ ); for the Congo sector (black dashed line),  $A_T = 65.21 \text{ SSS} + 15.509$  ( $R^2 = 0.9731$ ) very coherent with previous estimates (Koffi et al., 2010; Lefèvre et al., 2010; Lefèvre et al., 2021). Left: all data in both regions. Right: detail for data with Salinity higher than 32. Bottom: map identifying the data selected in the Amazon (triangle) and Congo (circle) regions.
