Otter trawl survey data with taxa and individual body mass information
Feeding guild data merged with survery data using taxa and body mass information
Feeding guild biomass and species summed by haul
Mean feeding guild biomass and species richness calculated across hauls and years per strata
Temporal correlations calculated for annual means of feeding guild biomass and species richness per strata
Stomach content data with predator taxa and individual predator body mass information
Predator taxa-body mass classes classified into feeding guilds via cluster analysis of diet
Predator taxa-body mass classes missing stomach content data identified
Knowledge gaps highlighted for future stomach content surveys
