

Supplement of

Climate Modes evaluation datasets from CMIP6 pre-industrial control simulations and observations

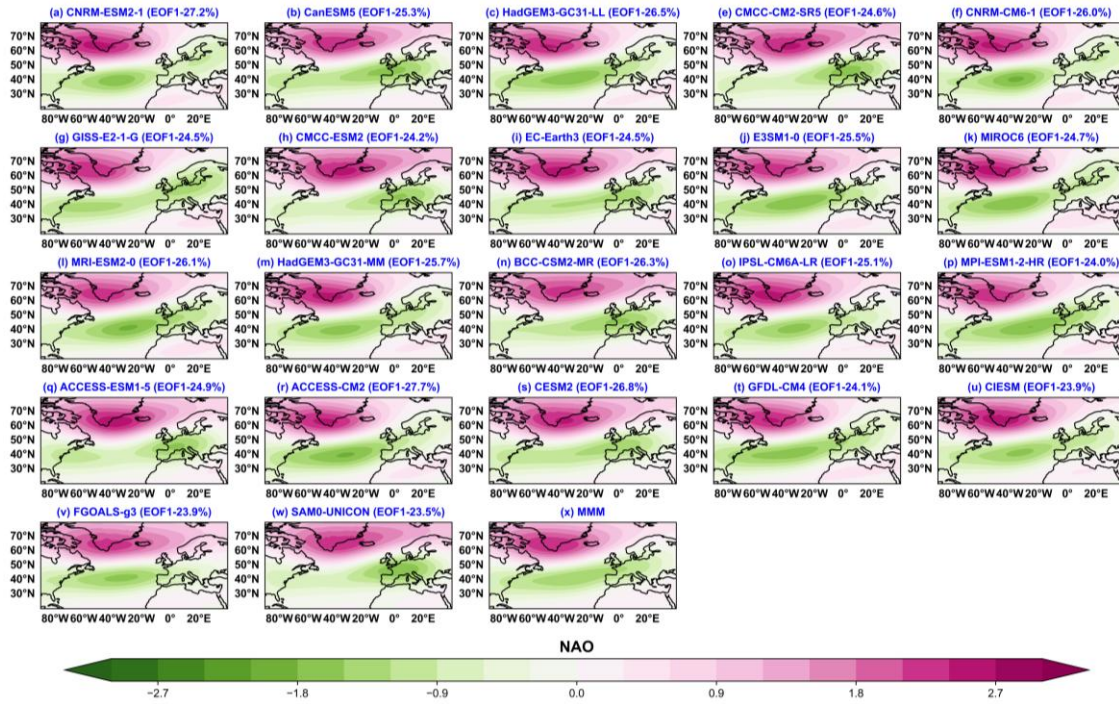

Fig. S1 Normalised spatial pattern of North Atlantic Oscillation (NAO; 1st leading mode in 500hPa geopotential height over North Atlantic) from (a-w) 22 CMIP6 models (x) MMM. (d) EC-Earth3-CC has been excluded due to substantial gaps in the geopotential height dataset, with many intermediate years missing.

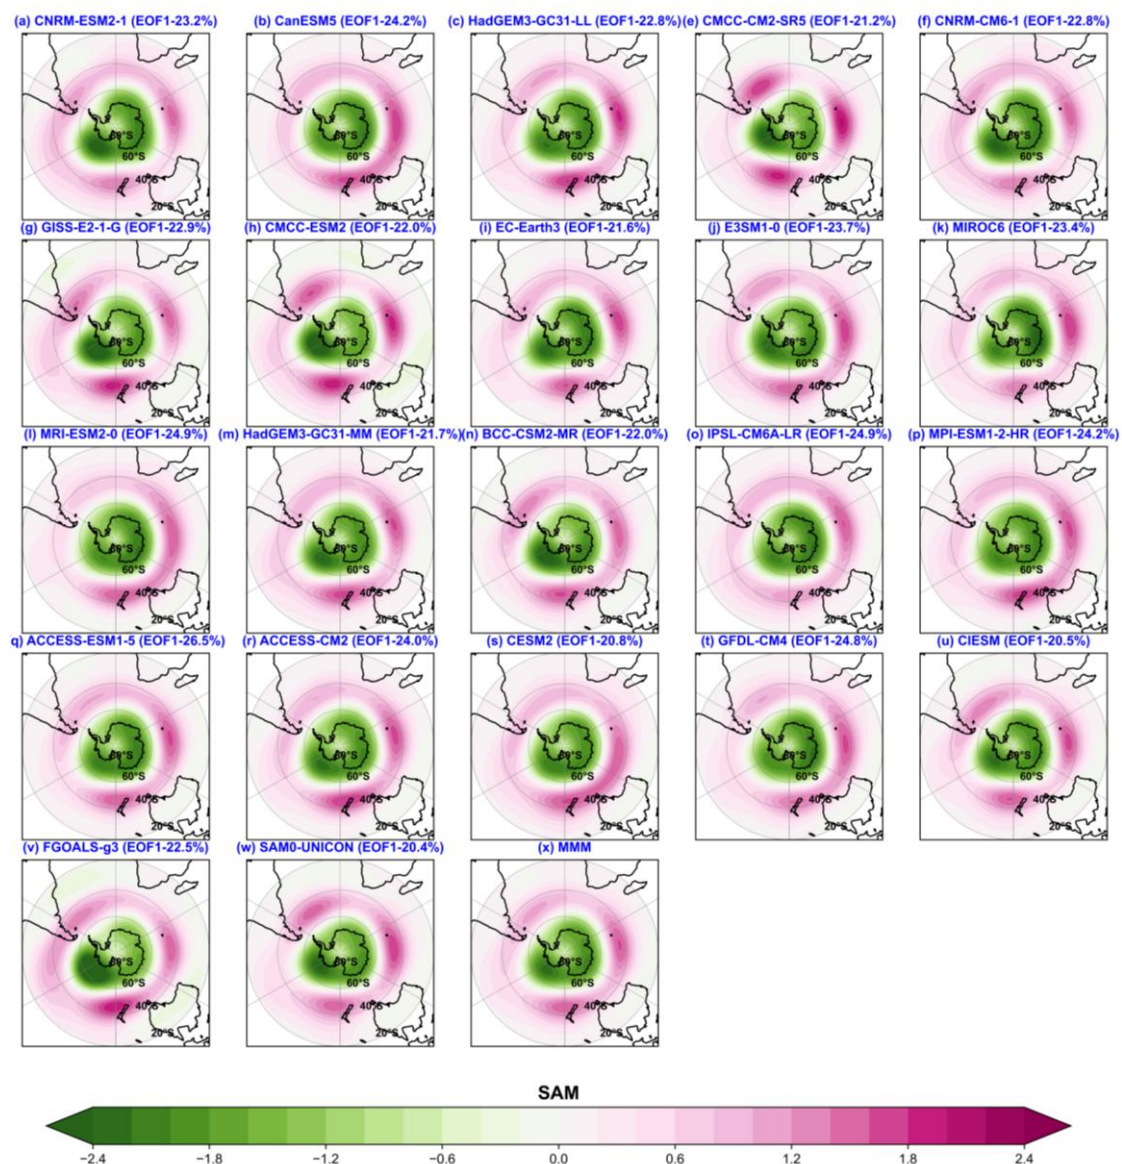

Fig. S2 Normalised spatial pattern of Southern Annular Mode (SAM; based on 1st leading mode in 500hPa geopotential height over Southern Hemisphere extra tropics) from (a-w) 22 CMIP6 models (x) MMM. (d) EC-Earth3-CC has been excluded due to substantial gaps in the geopotential height dataset, with many intermediate years missing.
