Received and published: 25 July 2011

Dear Thomas Gruber, scientific publications have a reliable availability through the well established publisher and library catalogs. All publications nowadays have a stable link through its DOI or other persistent identifier. The major aim of ESSD is to make data available to the scientific community. Those data need to be stable linked (as the publication is). It is mandatory in ESSD that the link to the data is provided through a persistent identifier; a link like <http://www.iapg.bv.tum.de/ESA-Mass-Transport> is not stable and thus not acceptable. Please substitute the link by a persistent identifier. see http://www.earth-system-science-data.net/general_information/repository_criteria.html
