

Interactive comment on “Future Flows Climate: an ensemble of 1-km climate change projections for hydrological application in Great Britain” by C. Prudhomme et al.

Anonymous Referee #2

Received and published: 18 September 2012

I have reviewed this paper and it is a good contribution to the field of earth System Science Data. The paper does not describe any of the methods or technical details about how the data was derived but I do not expect data papers to cover this in details as long as they are referring to a published journal paper describing the details. I recommend acceptance with no changes.
