

Interactive comment on “A long-term and reproducible passive microwave sea ice concentration data record for climate studies and monitoring” by G. Peng et al.

G. Peng et al.

ge.peng@noaa.gov

Received and published: 3 June 2013

We thank M. Tschudi for the positive feedback on our manuscript. We agree that it would be good for users to be aware that the melt onset is detected at a given grid cell at a given time and it does not address the motion of ice after the melt starts. This clarification will be added to the revised manuscript.
