ESSD seeks to endorse and honour the strong and clear open access policy of the Copernicus publication system. In the case of ESSD we extend that open access policy to all the data and data descriptions that we publish. In very rare cases we allow a short period of temporary closed access during a review process, to prevent premature disclosure in the case of high impact data and to facilitate collaboration with a non-open-access science journal - authors in that case connect a research paper in the science journal to the data in ESSD and vice versa. For both reasons we will process this Global Carbon Budget for 2016 without open access for a period of a few weeks as we and the partner journal complete our usual review processes. All ESSD materials - original manuscript, reviewer comments, and author responses, revised data set - will become fully open access at the time of final publication.
