

***Interactive comment on “Close range photogrammetric methods applied to the study of the fronts of Johnsons and Hurd Glaciers (Livingston Island, Antarctica) from 1957 to 2013” by Ricardo Rodríguez et al.***

**Anonymous Referee #2**

Received and published: 26 May 2016

I have read the review of anonymous referee #1 and I am afraid to say that I agree with most of the comments. I also consider necessary integrating the more developed work of Molina et al. (2007) on the subject. It is not indispensable to go through the referees' #1 comments as I think they are right. However, I strongly believe that if the authors carry out the instructions made by referee #1, the paper could be published, otherwise I would not recommend to publish it.
