Dear Referee,

We will modify the title and reorganize the paper following your recommendations. In particular, we will focus on the relevant aspects of our research and we will reduce the space given to not fundamental aspects, such as the spatial interpolation of temperature that is described on a paper currently under review. The main objective of the paper will be clearly specified and the motivations behind our work will be presented in a concise way. The OI description and seNorge2 will be restructured as suggested, such as the section on evaluation.

We very much appreciate the time and effort you put into the comments.

Sincerely, Cristian Lussana
