Received and published: 26 June 2018

We would like to thank the referees for their comments and suggestions.

We have taken into account the grammatical suggestions and also changed the figures according to the comments.

We did a small re-organization of the introduction text as requested by the referees.

We added an explanation on the white correction. This white correction was applied because several measurements were performed under homogeneous cloudy conditions. It was observed that the skylint is relatively white under these circumstances and a additional white correction improves the results.
