Dear Dr. Yang,

Thank you very much for your supportive comments. We share the post-seismic multi-temporal inventory of the Wenchuan earthquake with the aim of a better understanding of the evolution of post-seismic geohazards (landslides, debris flows etc.) and to encourage others also to share their inventories. Hopefully, we will have a good global dataset for the post-seismic landslides in the near future. We would be very glad to see others use our dataset for all kinds of research.
