Received and published: 18 April 2018

I as a coauthor of the manuscript admire reviewer’s very valuable comments particularly on structural information necessary for better modeling of the infiltration processes. However, I can claim that the information and datasets presented here were the maximum available and accessible data which could have been provided by contributors from different parts of the world. Though, much more datasets are available throughout the globe which hopefully will be extended in future researches in similar fields.
