Received and published: 24 April 2018

The paper entitled "Surficial sediment texture database for SW Iberia Atlantic Margin" by Costas et al. is an important contribution to the scientific and technical publics, making available grain size datasets that can be user beyond the examples mentioned by the authors. In this context I strongly recommend its publication. However, some corrections/clarifications (technical and scientific) must be done, addressed in the several comments I've made in the attached text.
