

Supplemental Information

Table S1. Transformation used to improve normality. We were unable to find a way to improve normality for live moss (L) bulk density.

Transformation	Where used
Log	Bulk density: D, F, M, amorphous N: fibrous C:N D, M, fibrous, amorphous
Square root	Bulk density: H N: D, amorphous C:N: L, F, mineral
Box cox	Bulk density: mineral, fibrous C: all horizons N: L, F, M, H, mineral C:N: H

Table S2. Average bulk density values by drainage and age class. Standard deviations are presented in parenthesis. Significant differences for a horizon code among drainage or age class are noted with superscripts.

Horizon Type	Drainage Class					Age class		
	Well	Moderately well	Somewhat Poorly	Poorly	Very poorly	New	Young	Mature
