The dataset described by this manuscript, located at https://figshare.com/articles/Rh_720_360_1980_2016_nc/8882567, has some significant problems.

1. No units are given, either in the netcdf file or on the Figshare webpage.
2. Latitude appears to be inverted (i.e. mirrored around the equator).
3. If the units are in gC/m²/yr, as appears likely, note that the file includes no area variable (needed to scale to a global flux, for example).

Discussion paper

4. Minor: RH is named "variable" in the file, and time is named "z", which is not particularly user-friendly.
