Please can we start over on this manuscript and data set? Having seen reviewer comments and read the manuscript myself, ESSD could not accept this initial product. Wrong dates, technical errors, descriptions do not match data, absence of uncertainty information, etc. It seems obvious to this editor that neither author nor co-authors did due diligence, e.g. proofreading, before submittal. Now author has evidently further contaminated the process by changing or adding data. Subsequent reviewer(s) will not see the same data as the first review?

Please withdraw the current manuscript. Check all data and data errors. Prepare a clean data set, preferably of calibrated values double-checked and with all available uncertainties explicitly documented. Register data under a new DOI. Resubmit a revised manuscript, after careful checking by all authors.

Taking these steps will not slow down ESSD review and evaluation processes. Those processes might actually go faster via these steps.
