

Dear Jan Pohjola et al,

many thanks for addressing all change requests by the reviewers. Before finally accepting the manuscript, I would like to address some very minor technical corrections for the manuscript and the dataset:

Data:

1. Table: Fennoscandia_lake_mire_isolation.tab, rows 261-266 (Hedenström. Early Holocene shore displacement in eastern Svealand, Sweden): The provided link to the pdf (<https://pubs.sub.su.se/5454.pdf>) is not accessible from outside Sweden. This is ok as most of the data are in the table. However, it would be helpful to add a note in the data table saying "not accessible outside Sweden) and preferably changing the link from "<https://pubs.sub.su.se/5454.pdf>" to "http://su.diva-portal.org/smash/record.jsf?pid=diva2%3A1094181&dswid=863". The latter represents the landing page of this work and includes the information about the access restriction.
2. The DOI of the data are not registered. Please ask PANGAEA to register the DOI after addressing my first point. After the DOI is registered, please change all <https://doi.pangaea.de> links in the paper to <https://doi.org> (in the abstract, data availability statement and references)

Paper:

- Please address the changes in the DOI link to the data as mentioned above
- Page 3, line 6: please change "An example of this kind age reversal..." to "An example for this **kind** of age reversal..."
-
- Page 4, first paragraph, second line: please change "younger than than" to "younger than"

Many thanks and best regards

Kirsten Elger
