comments and recommendation on the text are given as comments in the pdf file. Here a summary of the comments.

The data paper provides a good overview on the data provided from the UK ECN Network. Method and dataset descriptions are clear. I checked several (not all) of the DOI and links are working providing the described content.

Observation sites - reference to the documentation of the observaiton sites (if existing) on DEIMS-SDR should be provided to provide a further description of the sites to the

C1

user. This also should be added to table 1.

Method description - temporal scale of observation is provided in table 2 but should also be mentioned in the textual description of the method. This would be a benefit to the reader. In addition table 2 should be mentioned in the '2. Methods'.

Please also note the supplement to this comment:
