

Summary of changes:

No additional changes were made beyond what was needed to address the editor's suggestion below, and no additional typos were found.

Comment:

Small residual concern related to authors' use of Google Earth Engine. We understand ease of access and other convenience, but we also know that Google changes (updates) products on unpredictable and undocumented time schedules. Please can authors add a small table, perhaps Appendix Table 3, that lists exact original sources, versions, access dates of those GEE products used here? Such information allows users to know exactly what information informed these data products but also to expect and identify changes.

Response:

An appendix table (Table A3) was added. The table contains metadata for the four different climate models that were accessed using Google Earth Engine. This includes links to the Google Earth Engine Catalog for each product, version numbers, date of access, and the original source/organization that produced the data. In-text references to Table A3 were added in sections 2.4 and 2.5 where the use of the climate models is discussed.
