Dear sir or madam,

thanks for the interesting paper. I have some question regarding your various uncertainty sources described on line 204f:

(1.) Why do you group them in two levels and what is the meaning/advantages of these levels? (2.) What is the explanation of e11, e12, and CWVC? Do they have any physical meaning? (3.) I assume you derived the thresholds for the uncertainty level in the paper Zhou et al. (2019b)?

Thank you and best regards, Andreas Baumann
