

Interactive comment on “Spatially-explicit estimates of global wastewater production, collection, treatment and re-use” by Edward R. Jones et al.

Anonymous Referee #2

Received and published: 17 November 2020

This study provided the comprehensive and consistent global outlook on the state of wastewater production collection treatment and reuse. And the country level wastewater data are downscaled and validated at 5 arc- minute resolution. Its results represent the first efforts to global wastewater collection treatment and reuse at the subnational level. It is a very interesting and useful work for the wastewater research. And the quality of the data set as submitted is high. The data analysis and discussions are sufficient. So I think it prepared well for publication. It analyzed the relationship among the production, collection, treatment and reuse of wastewater, the income level and the population. However, I think the influence from the pollution of agriculture, especially for the global grain production areas, can not be ignored. So I suggest the author to
