

I have requested an update of the dataset and description in the PANGAEA database; however, these changes are still awaiting implementation.

I have also requested an update of the ERC.

The input sample data are included in the PANGAEA dataset. This has now been stated explicitly in the Data Availability section of the manuscript.

Besides this, I spotted a minor error in the script: No seed was set when running the spatial leave-one-out cross validation, leading to slightly different results each time the script is run. This has now been corrected, but this has led to some minor changes in section 4.3 Model accuracy.
