Thank you for this valuable input on this data paper.

We will make sure we incorporate the following information into the revised draft:

- 1) No colour correction has been conducted. We prefer to upload unprocessed data for these data sets, to allow users to process further as required.
- 2) The OFOBS vehicle is described in detail in the referenced paper, but we will summarise that paper here in a general paragraph, and elaborate on the camera used in greater detail.

[Printer-friendly version](#)

[Discussion paper](#)

3) Our ideal flight height is 1.5 m above seafloor, but difficult to achieve in the high relief Powell Basin area. Our lasers give a size estimation for seafloor coverage. These points will be made clearer in the revised version.

4 - 5) These minor grammatical errors will be addressed.

I think these points will make the data more straightforward for analysis, so thanks again!

Autun (on behalf of all authors)
