Dear Vincent Regard,

we appreciate the effort and time that you dedicated to our manuscript, which certainly helped to improve the quality of the revised version. We expanded the explanations on the criteria and methods used to define the placement of swath profiles, improved the description of the quality rating, and included a second calibration site. We provide our point-by-point answer to your comments in the attached PDF.

Kind regards,

C1

R. Freisleben, J. Jara-Muñoz, D. Melnick, J.M. Martínez, M.R. Strecker
