Thank you very much for your comments. We look forward to taking your thoughts into consideration when revising and improving the manuscript.

Regarding your comment "Certain method can be employed to standardize the uncertainty associated with the data", could you clarify what method or class of methods you have in mind?

In regards to "some illustrations of the data" and "field photographs", Figure 6 of the 2014 GlaThiDa paper (<https://doi.org/10.1016/j.gloplacha.2014.09.003>) has glacier photos alongside summary thickness data. Is this what you had in mind?
