40 **Fig. S2. Validation of predictor values extracted from global maps.** (A) Mean annual temperature,  
 41 (B) mean annual precipitation, (C) elevation, (D) soil organic C concentration, (E) soil sand content,  
 42 (F) soil clay content, and (G) soil pH. Dashed line is the 1:1 line. Blue line and shaded area indicate the regression line and 95%  
 43 confidence interval, respectively.

**Fig. S3. The relationship between soil total P concentration and predictors and latitude.** Soil total P concentration in relation to SOC concentration, MAT, soil sand content, MAP, elevation, net primary production, soil pH, soil depth, soil clay content, slope, and latitude (A, B, C, D, E, F, G, H, I, J, K, respectively). Purple boxes and error bars represent the mean values and standard errors, respectively, of binned soil total P concentration measures by every  $30 \text{ g kg}^{-1}$  for SOC concentration, every  $2^{\circ}\text{C}$  for MAT, every  $50 \text{ g kg}^{-1}$  for soil sand content, every  $250 \text{ mm year}^{-1}$  for MAP, every  $200 \text{ m}$  for elevation, every  $0.05 \text{ kg C m}^{-2}$  for net primary production, every  $0.5 \text{ pH}$  variation, every  $5 \text{ cm}$  soil depth, every  $50 \text{ g kg}^{-1}$  clay content, every  $5^{\circ}$  slope, and every  $2^{\circ}$  latitude, respectively. Solid blue lines indicate results of local polynomial regressions based on the binned mean values. For visualization, we chose to limit the y-axis to  $1300 \text{ mg kg}^{-1}$ .
