33

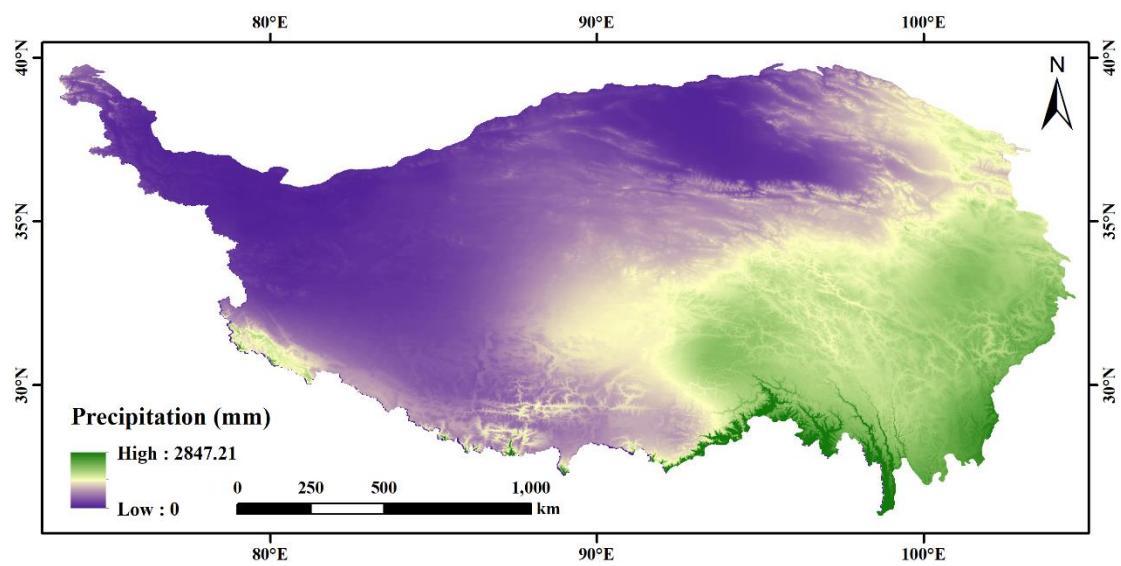

34 **Figure S1.** Relationships of soil $\delta^{13}\text{C}$ with SOC content in 0-5 c

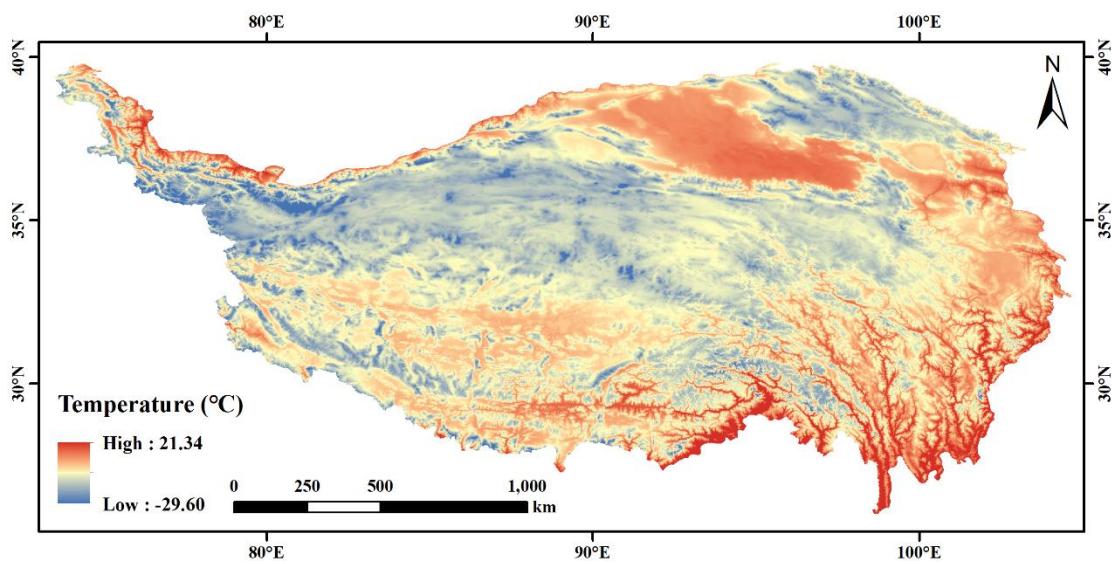

Importance value of variables

35

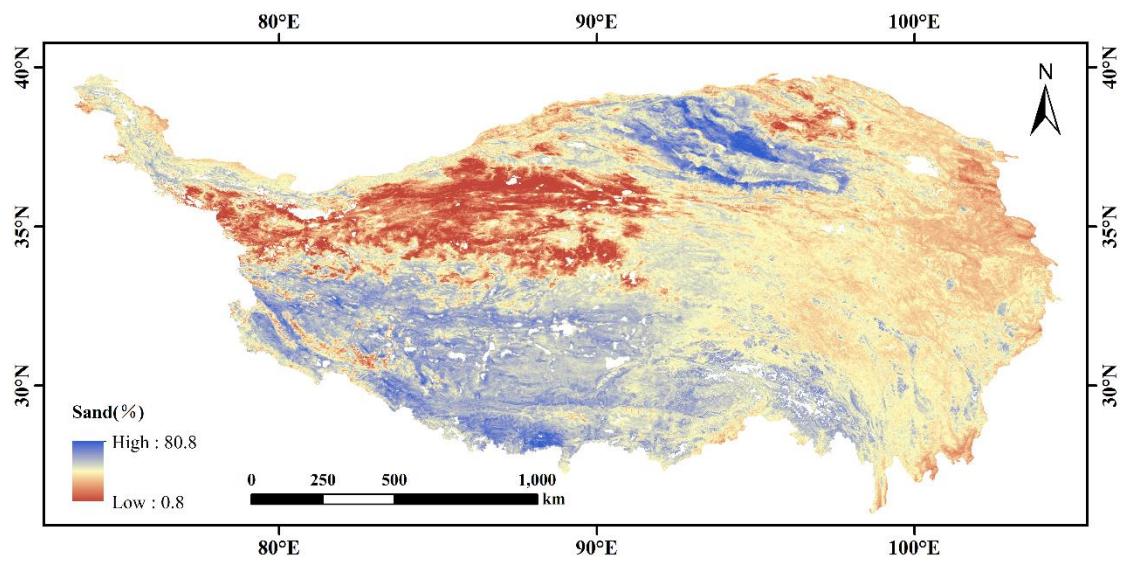

36 **Figure S2.** Importance of variables, denoted by percentage increase of mean-squared error
37 (%IncMSE) (left) and the increase in node purity (IncNodePurity) (right), for topsoil $\delta^{13}\text{C}$ estimation
38 RF model built from training dataset without considering plot location uncertainty. Vegetation_types,
39 MAP, NDVI, MAT, Altitude, pH, represent the ecosystem types, annual mean precipitation,
40 normalized difference vegetation index, elevation, soil pH, respectively.

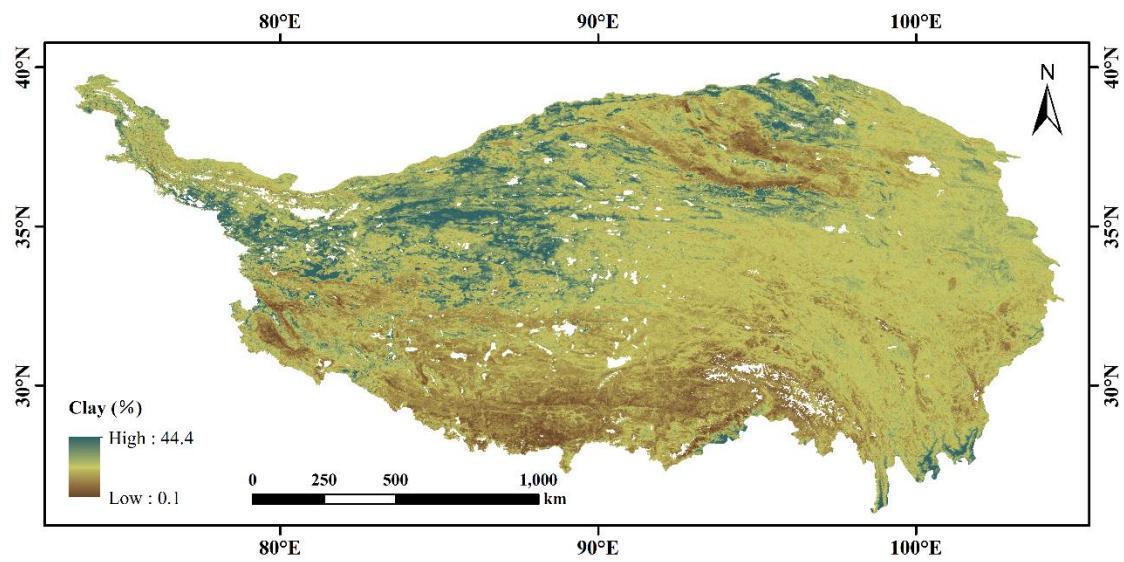

43

44 **Figure S4.** The distribution of temperature during 2000-2010.

47

48 **Figure S6.** The distribution of soil clay content on the Tibetan Plateau.

Table S1. General descriptions of the dataset used in this study.

Ecosystem types	N	Mean	Standard	Minimum	Maximum
			Deviation		
Forests	103	-26.3	1.60	-29.7	-18.8
Shrublands	59	-24.3	2.00	-28.8	-18.2
Grasslands	218	-23.9	1.84	-27.6	-18.5
Deserts	16	-18.9	2.37	-22.5	-15.1

N are the number of soil samples.
