

Response to Editor's comments on "The UKSCAPE-G2G river flow and soil moisture datasets: Grid-to-Grid model estimates for the UK for historical and potential future climates" by Kay et al.

Thank you for properly addressing the reviewers' comments in your revised manuscript. I am happy to accept this manuscript for publication. Please make sure to upload a higher-resolution map (i.e., Figure 2). Additionally, I would like to encourage you to also release any code that can be used to reproduce this work (e.g., the figures you provide).

Thank you. We have adjusted the format of the references as requested in a prior email, and uploaded this version of the manuscript. We have also uploaded eps versions of the 8 figures, in a zip file under the 'Supplement' option.
