Response to editorial question:

Regarding the figure #1: Please ensure that the colour schemes used in your maps and charts allow readers with colour vision deficiencies to correctly interpret your findings. Please check your figures using the Coblis – Color Blindness Simulator (https://www.color-blindness.com/coblis-color-blindness-simulator/) and revise the colour schemes accordingly.

Response: We checked figure #1 at the Color Blindness Simulator. As not only different colours (red, green), but also different symbols (circle, cross) are used to depict the two different data types shown in figure 1, it is readable for every types of Color Blindness

Please note that I somehow could not upload the main.tex file, the files containing the data for table creation and the figure files. The main.tex file was somehow not accepted and the plots.zip folder was rejected for holding further folders, although it did not. There was no option to upload the table data files.

I have uploaded these files here as main.tex, plots.zip and tables.zip:
