

Routines to produce plots given in Choudhury and Tesche (2023) data paper

Figure 2

Read model and CALIOP data

```
clc,clear,close all
% model data
model_path = 'data\model\surface_global_models_year2011.hdf';
mlat = double(hdfread(model_path, '/lat'));
mlon = double(hdfread(model_path, '/lon'));
mCCN = read_ccn_model(model_path);
mCCN_med = nanmedian(mCCN,3);
mCCN_max = nanmax(mCCN,[],3);
mCCN_min = nanmin(mCCN,[],3);
```

```
% CALIOP data
caliop_path = 'data\CALIOPyearly\CCN_monthly_cloudfree_2011_8km.nc';
clat = double(ncread(caliop_path, 'lat'));
clon = double(ncread(caliop_path, 'lon'));
calt = double(ncread(caliop_path, 'altitude'));
cCCN = double(ncread(caliop_path, 'CCN'));
cN = double(ncread(caliop_path, 'N'));
% annual average
cCCN1 = nansum(cCCN.*cN,4)./nansum(cN,4); % yearly average
% average CCN between altitudes of 0.5 and 1 km
cCCN1 = squeeze(nanmean(cCCN1(:,:,calt<1 & calt>0.5),3))';
```

Regrid model data to CALIOP grid

```
[mlong,mLATg]=meshgrid(mlon,mLAT);
[clong,clatg]=meshgrid(clon,clat);
mCCN_medc = interp2(mlong,mLATg,mCCN_med,clong,clatg);
mCCN_maxc = interp2(mlong,mLATg,mCCN_max,clong,clatg);
mCCN_minc = interp2(mlong,mLATg,mCCN_min,clong,clatg);
```

Plot the global CCN maps from CALIOP and model

```
close all
