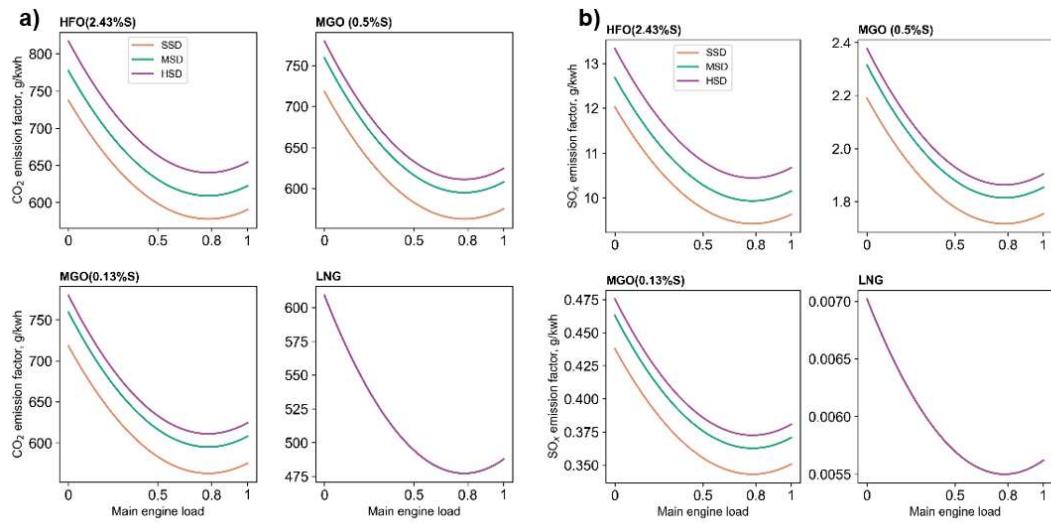

Figure S1: a) CO₂ and b) SO_x emission factors of different types of fuel as a function of main engine load.

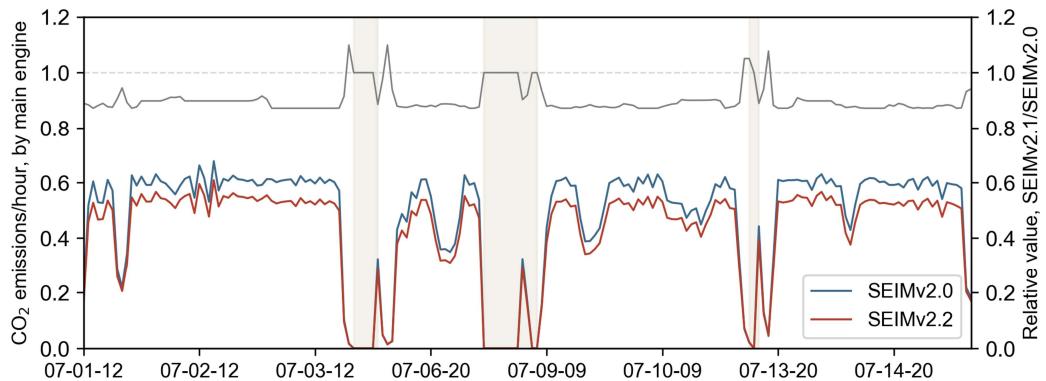

Figure S2: Hourly CO₂ emissions of a typical oil tanker (MMSI code: 414404060) as estimated by SEIMv2.0 and SEIMv2.2. The dark gray line represents the ratio of SEIMv2.2 calculated results to those of SEIMv2.0. The shaded gray regions highlight periods during which the vessel is either at anchorage or berth.

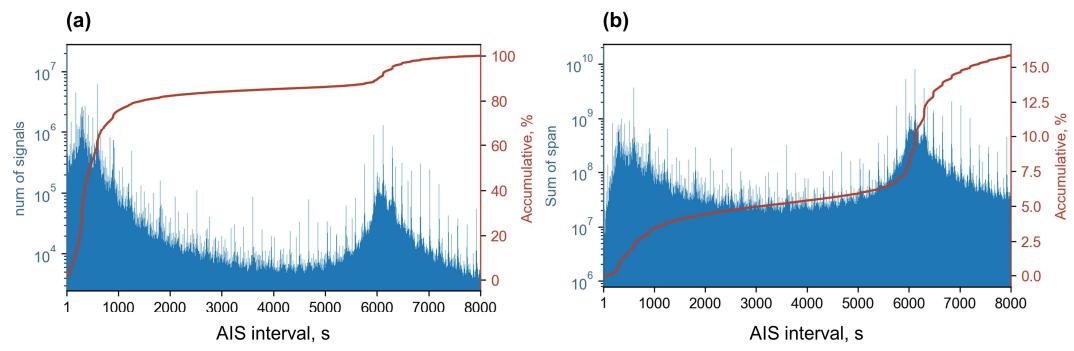

Figure S3: AIS signals intervals frequency statistics. a) Distribution of AIS signals counts; b) Distribution of cumulative AIS signal intervals.

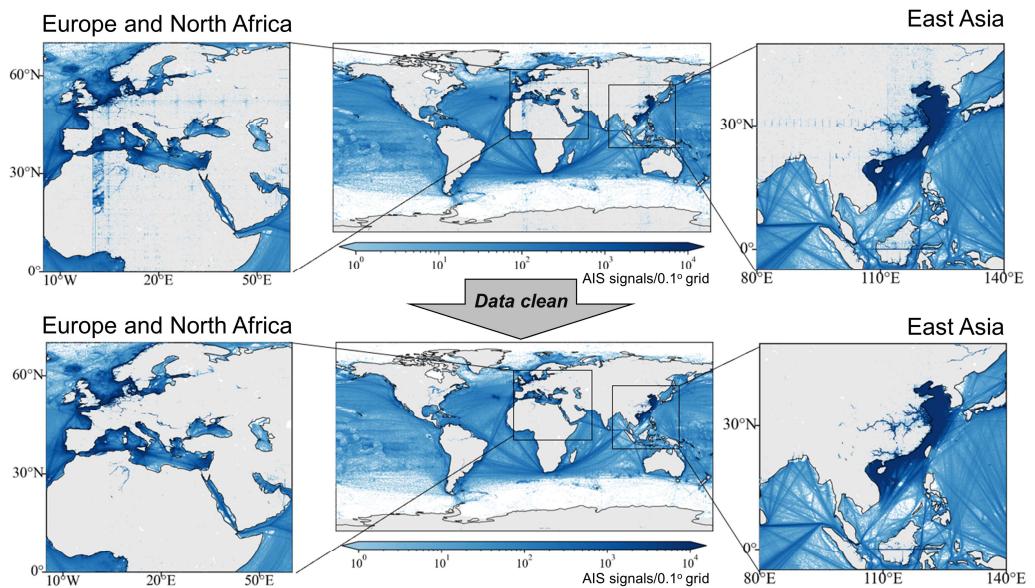

Figure S4: Spatial distribution of ship AIS signals before and after spatial anomalies cleaning.

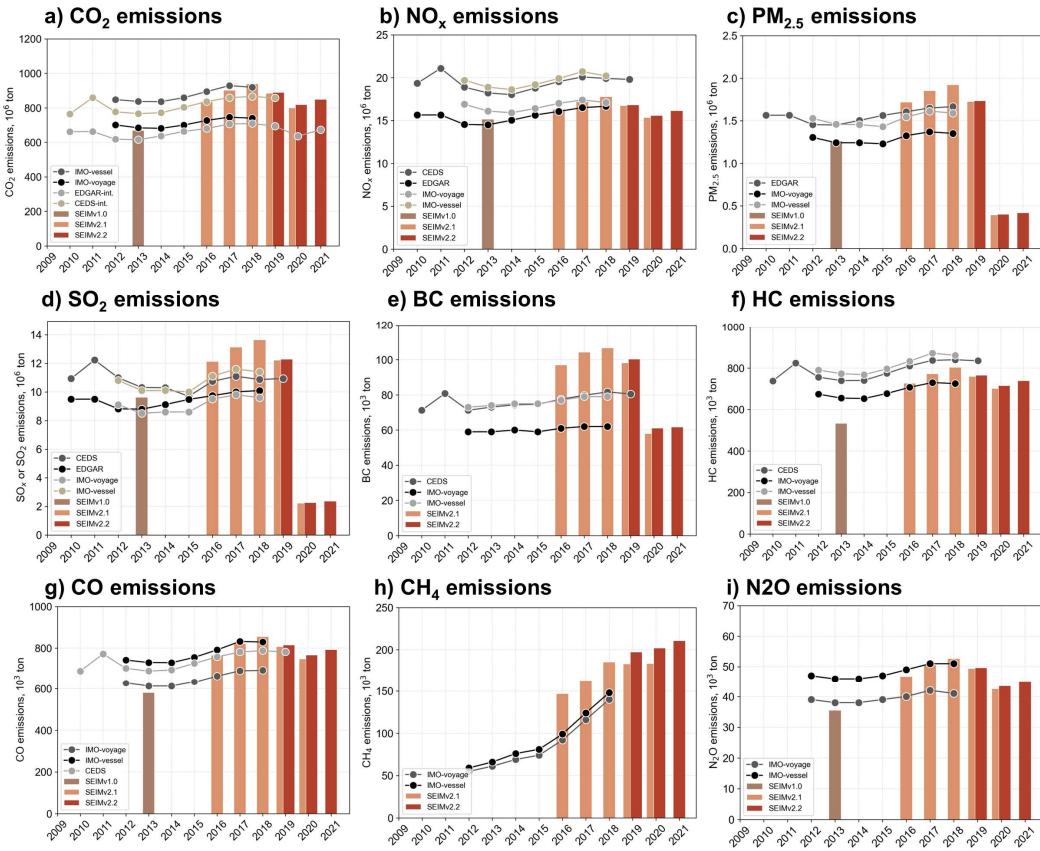

Figure S5: Global trends in shipping emissions from 2010 to 2021 with results from different SEIM version and other data sources.
