6

7 **Fig. S1** PRISMA flow diagram showing the procedure used for selection of studies for synthesis.

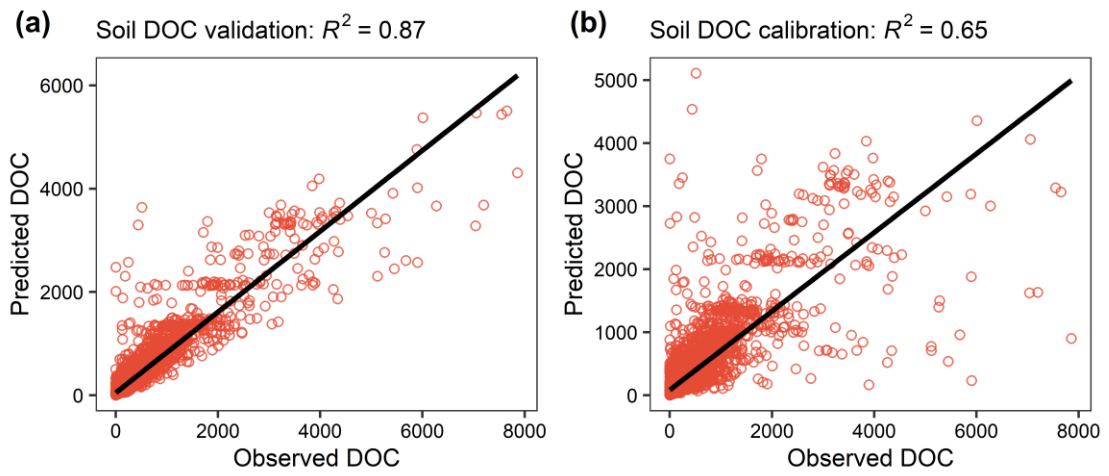

10 **Fig. S2** The autocorrelation between predictors. **(a)** The relationship between soil organic carbon and
11 soil total nitrogen. **(b)** The relationship between soil clay and silt content.

12

13

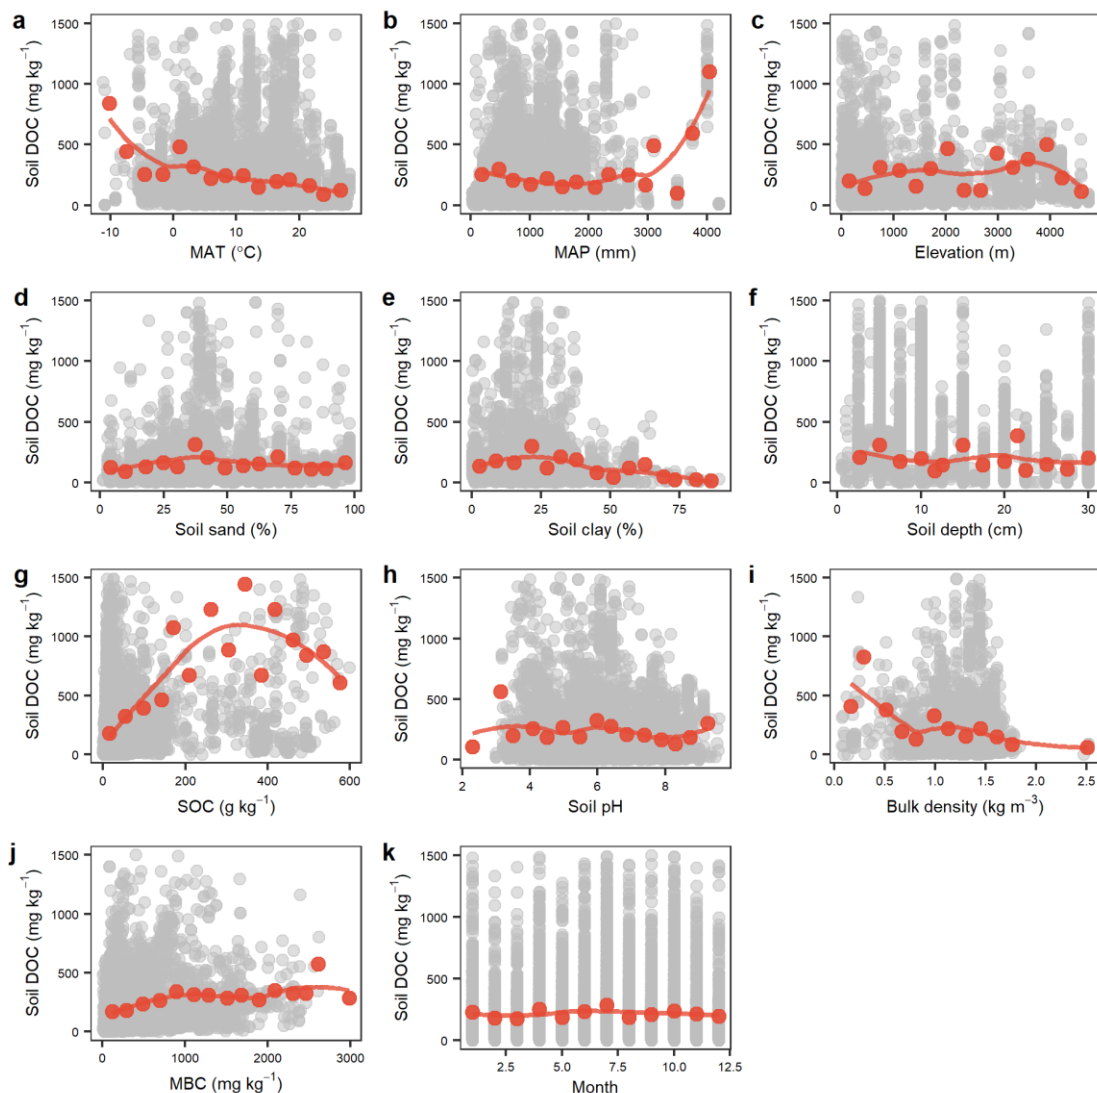

14 **Fig. S3** The validation of random forest models for soil dissolved organic carbon (DOC). **a** Results of
15 *K*-fold cross-validation. **b** Model calibration between observation and prediction values.

16

17

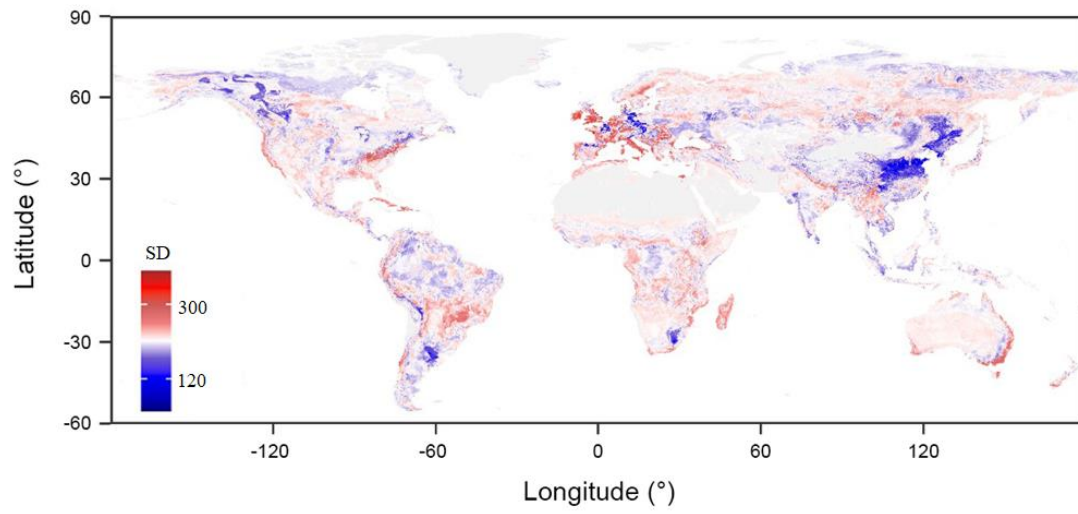

18 **Fig. S4** The relationship between soil dissolved organic carbon (DOC) concentration and predictors.
 19 Soil DOC concentration in relation to mean annual temperature (MAT), mean annual precipitation
 20 (MAP), elevation, soil sand content, soil clay content, soil depth, soil organic carbon (SOC) content,
 21 soil pH, bulk density, and month (**a, b, c, d, e, f, g, h, i, j, k**, respectively). Binned soil DOC
 22 concentration measures by 15 groups for predictors, except for month (12 groups). Red dots represent
 23 the mean values. Solid red lines indicate results of local polynomial regressions based on the binned
 24 mean values. For visualization, we chose to limit the y-axis to 1600 mg kg⁻¹.

25

26

27 **Fig. S5** Standard deviation (SD) of predicted soil dissolved organic carbon concentration (mg kg^{-1}).

28

29

30 **Table S1.** Summary of independent variables used in this study to predict soil dissolved organic carbon
 31 concentration.

Groups	Variables	Original resolution	Data source
Climate	Mean annual temperature	1 km	http://worldclim.org/bioclim
	Mean annual precipitation	1 km	http://worldclim.org/bioclim
	Elevation	1 km	http://worldclim.org/bioclim
Plants	Ecosystem	1 km	https://sedac.ciesin.columbia.edu
Soil	Soil organic carbon	250 m	https://openlandmap.org
	Soil pH	250 m	https://openlandmap.org
	Sand	250 m	https://openlandmap.org
	Cay	250 m	https://openlandmap.org
	Bulk density	250 m	https://openlandmap.org
	Microbial biomass carbon	1 km	https://doi.org/10.6084/m9.figshare.19556419 .
	Soil depth	10 km	http://globalchange.bnu.edu.cn/research/data

32

33

34 **Table S2.** Comparison of model performance for all applied predictive models. Using the assembled
 35 soil dissolved organic carbon concentration, seven models were applied (linear regression model, lasso
 36 regression model, elastic net model, bagged cart model, boosted regression trees model, cubist
 37 regression model, and random forest model). The R^2 and root-mean-square error (RMSE) were
 38 calculated from 10-fold cross-validation to assess model performance.

Model	RMSE	R^2	Regression	Model type
LM	410	0.108	Linear	Non-selective
LEAPS	427	0.101	Linear	Variable selective
ENET	425	0.101	Linear	Variable selective
BAGGED	332	0.420	Non-linear	Machine learning
BOOSTED	315	0.485	Non-linear	Machine learning
CUBIST	254	0.666	Non-linear	Machine learning
RF	250	0.674	Non-linear	Machine learning
