[a] Site picture: Using site picture to derive 100% coverage of grassland or cropland. Except for AT-Neu and US-FPe, all site pictures were obtained from the regional network[e] to which the site belongs. AT-Neu pictures were obtained from the research group's network (http://www.biomet.co.at/home/). US-FPe pictures were obtained from the Global Monitoring Laboratory (https://gml.noaa.gov/grad/surfrad/ftpeck.html).

[b] Satellite data: Indicating the PCT_PFT obtained using the 300m global PFT map (Harper et al., 2023) .

[c] FLUXNET BADM: BADM (Biological, Ancillary, Disturbance, and Metadata) file from the FLUNET website (https://fluxnet.org/).

[d] AmeriFlux BADM: BADM file from the AmeriFlux (https://ameriflux.lbl.gov/).

[e] Regional network: AmeriFlux (https://ameriflux.lbl.gov/), ChinaFlux (http://www.chinaflux.org/), European Fluxes (http://www.europe-fluxdata.eu/) ,OzFlux (https://www.ozflux.org.au/), and Swiss Fluxnet (https://www.swissfluxnet.ethz.ch/).

Table S2: Selected years for the 90 sites and corresponding databases. The excluded year denotes years excluded due to a high percentage of gap-filled data, with the reason (Flux or VPD) in parentheses indicating the specific variable with a high gap-filled proportion (Flux: QC > 1 exceeds 10%; VPD: QC > 0 exceeds 10%). The selected year indicates the years of high-quality datasets that were ultimately retained.

Selected site	Excluded year (Reason)	Selected year	Database
AT-Neu	2002-2003 (VPD)	2004-2012	FLUXNET2015

25 **Table S3:** The 80 sites excluded and specific reasons for exclusion. Four situations are included: only one year of observations; high proportion of gap-filled data in flux or VPD; lack of surface heat flux observations and 10 sites with external disturbances. Flux and VPD in parentheses are the same as in Table S2.

Excluded Site	Reason for excluding	Database
