

2nd Review

ForestScan: a unique multiscale dataset of tropical forest structure across 3 continents including terrestrial, UAV and airbourne LiDAR and in-situ forest census data

Dear Authors,

Thank you for the revised manuscript I can see that you have made many improvements to the document. Please note a few minor issues that should be addressed prior to publication.

Chavana-Bryant et al.

- The figures are much improved – thank you. Please however, consider the readability of the text shown (otherwise it is worthless), here I particularly refer to the size of the scale bar, legend and the plot labels.
- Please revisit your abbreviations once more, thank you for making updates throughout the manuscript towards this point. Nevertheless, please consider the abstract as a stand-alone section, here, all abbreviations should be defined (cal/val, EO etc) and then once again in the first instance from the introduction forward (e.g., AGB).
- Line 145 - display values with equal number of decimal places to be specific (here and throughout)
- Line 356 – January **TO** March or January **AND** March 2020

With best wishes
